

# Sneak peek at Geodata

WiMLDS Zurich / Litix / SIT Academy

2022.05.18, Zurich

Before we start!

Give your names to Kate -> we need to create the user  
accounts

# Who are we?

WiMLDS Zurich:

Our mission is to support and promote women and gender minorities who are practicing, studying or are interested in the fields of machine learning and data science.

Litix:

Consortium of freelancers in the area of data analytics, geodata/GIS and applied statistics.

SIT Academy:

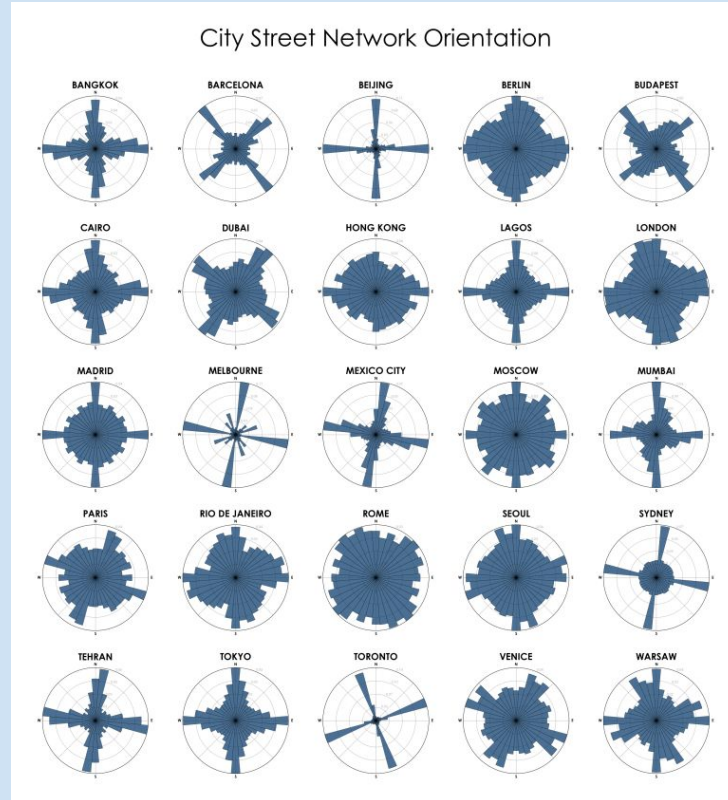

SIT Academy is a coding and data science academy offering a variety of programs to motivated learners.

Presenter today: Agnes Gubicza from WiMLDS

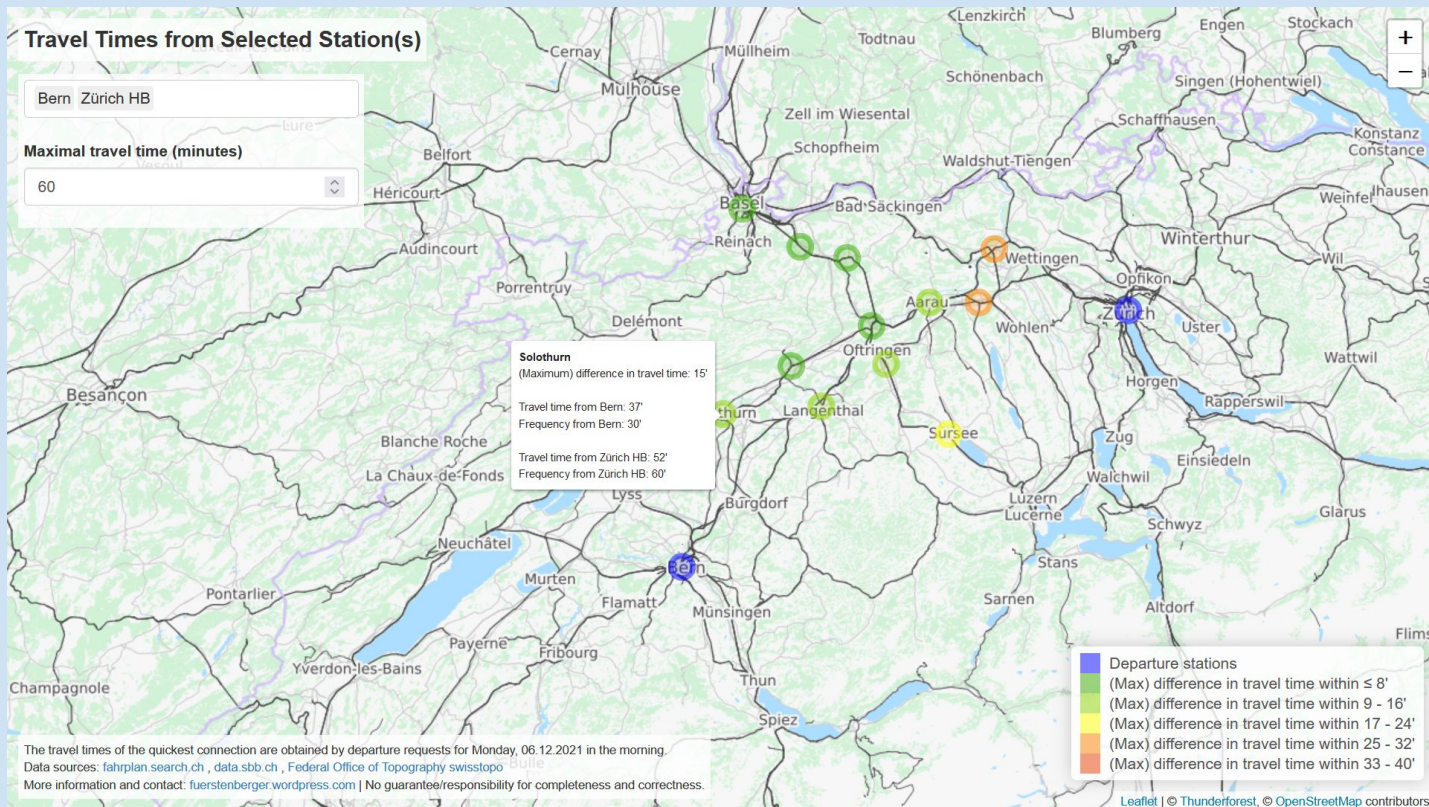

# What is going to happen today?

- Brief introduction to the theory
- 2+1 exercises
  - Visualize different types of geodata / geoservices
  - Spatial analytics
- Have fun!

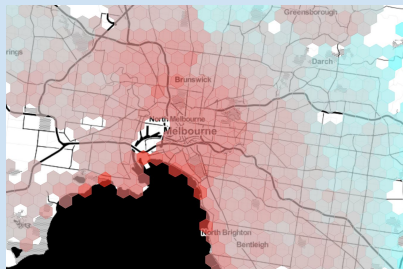

# Cool examples: Urban data visualization

# Where should we meet to have equal commute?

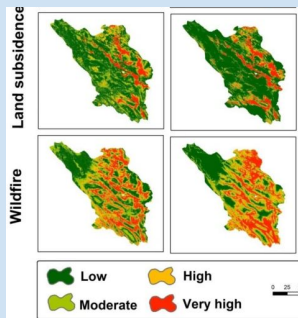

# Machine Learning with Geodata

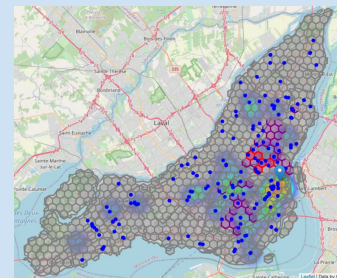

Housing prices prediction

<https://towardsdatascience.com/the-impact-of-geospatial-features-on-machine-learning-3a71c99f080a>

Natural hazards prediction

<https://www.nature.com/articles/s41598-020-69233-2>

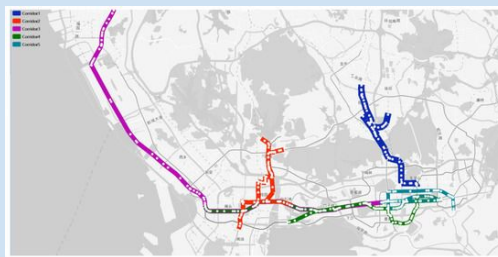

Finding optimal placement

<https://towardsdatascience.com/the-battle-of-the-neighborhoods-open-a-movie-theater-in-montreal-355cf5c679b8>

Annotating satellite imagery

<https://www.gamaya.com/solutions/projects-partnerships>

Mining mobility data

<https://www.mdpi.com/2220-9964/8/10/434>

# What is geodata?

Geodata:

- *spatial data*
- geographical reference
- Focus on location in the real world

GIS:

- Geographical Information System
- generic term for geodata related *software*

# Raster data

<https://desktop.arcgis.com/en/arcmap/10.3/manage-data/geodatabases/raster-basics.htm>

Array, grid of numbers that correspond to particular geolocation

Height model

<https://gisgeography.com/spatial-data-types-vector-raster/>

# Vector GIS objects

**points**

Object w/o size/area

Landmarks, cities, people,  
points of interest

**lines**

Path: Set of points connected  
in a particular order

Rivers, roads

**polygons**

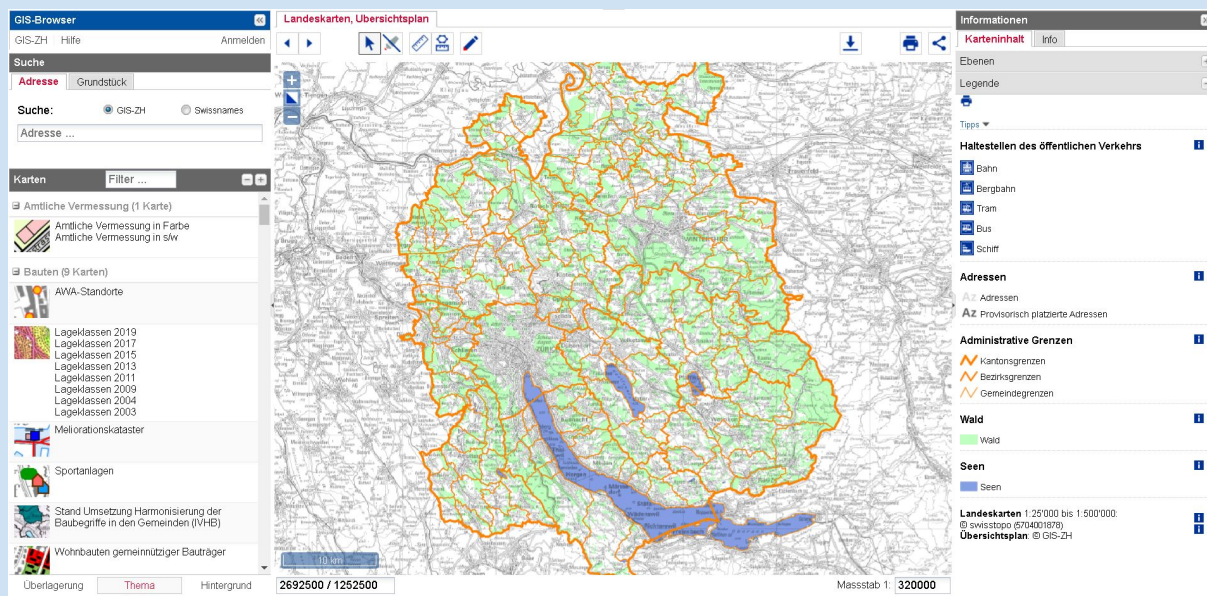

Area with boundaries: Set of  
points connected in a particular  
order, closed

Lakes, building footprint, country  
borders

Vector objects may come with **attribute tables**

# Geodata, maps, layers

- geodata is stored in layers
- map is a set of layers

To display a layer, a symbology / style (e.g. color code) is used:

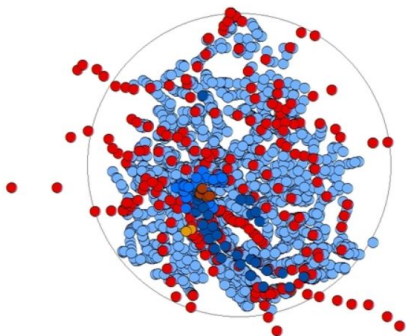

- height model with color ramp
- road network layer with and without symbology

geoportal of Kt Zurich

# Demo data access

Geodatenatz

Haltestellen des öffentlichen Verkehrs

Kontakt

Inhalt / Identifikation

GIS-ZH Nr.  
140

Bezeichnung  
Haltestellen des öffentlichen Verkehrs

<http://www.geolion.zh.ch/geodatensatz/883>

## Abgabeformat

DXF (.dxf); ESRI Shapefile (.shp); Comma separated text (.csv); ESRI File Geodatabase (.gdb); GeoPackage (.gpkg);

## WMS

WMS ÖV-Güteklassen

WMS Haltestellen des öffentlichen Verkehrs

WMS Administrative Einteilungen (OGD)

## WFS

WFS Haltestellen des öffentlichen Verkehrs

Allgemeiner WFS für Open-Government-Data des Kantons Zürich (OGD ZH WFS)

# Geoservices

**WMS: web map service** - raster data or maps (incl. symbology and legend information)

**WFS: web feature service** - vector data (with or without symbology, with attribute table)

	geodb_oid	gefstufe_hw	label_hw
0	256486	2	hf4
1	256479	2	hs4
2	256482	2	hf4

	geodb_oid	objectid	nhstid	diva_nr	chstname	cnal
0	413985	83665	8576245	2986	Regensdorf, Zentrum	Regensc
1	413986	83666	8576246	1850	Regensdorf, Ostring	Regensc
2	413987	83667	8576248	943	Watt, Geerenweg	W

# Common static geodata formats

- GeoJSON
  - extension of JSON
- ESRI / Shapefile
  - very messy
- Tabular data
  - CSV
- ...many others

A	B
id	geo_shape  { "type": "Polygon", "coordinates": [[ [5.595422739518895, 46.574661252730515], [5.5868864112024, 46.578124834208275], [5.566460487135743, 46.579404434922125], [5.558571581276076, 46.580572027975954], [5.561819437593718, 46.587949918898076], [5.575191603674612, 46.59190224479517], [5.580673541265257, 46.59754467932337], [5.582347290927083, 46.60141691853218], [5.587289521318402, 46.59292683804338], [5.604997996100999, 46.58938109997026], [5.611508140899815, 46.5826199806949], [5.603671590915408, 46.57586134356789], [5.595422739518895, 46.574661252730515]] ]}] }

# Geopandas

Familiar Pandas routines

Additional geo-methods

- `_.area`, `_.bounds`
- `_.distance`, `_.centroid`
- `_.contains`, `_.intersects`

Dtype: geometry

Powerful, but cumbersome to install on Windows :(

```
In [12]: world['centroid_column'].head()
Out[12]:
0    POINT (163.85316 -17.31631)
1    POINT (34.75299 -6.25773)
2    POINT (-12.13783 24.29117)
3    POINT (-98.14238 61.46908)
4    POINT (-112.59944 45.70563)
Name: centroid_column, dtype: geometry
```

# Plan for today

- Use Python Geopandas for analysis and Leaflet for visualization
- 2 in-class exercises + 1 extra exercise
- You will work on the server:
  - Create a user account:

**34.65.177.87**

- Pull the repo (THIS WILL OVERWRITE!!!):

**<https://tinyurl.com/GeoDataWS>**

- The server will stay up until **Monday**, so you can play with the exercises also after the workshop.

Outro / discussion

Thank you!
